Productivity & Attrition Review

The internal workforce model shows fast growth in digital and data roles alongside the highest attrition rate. Atelier headcount is more stable, but capacity is constrained by site utilization and craft throughput.

Function	Attrition %	Productivity Signal
Digital / Data	19.6%	Hiring ahead of full utilization
R&D / Product	13.9%	Project load expanding
Retail Operations	12.2%	Service intensity rising
Manufacturing / Ateliers	6.8%	Stable but specialized skills

Cross-reference DG-88 and OM-27 before making any conclusion about digital investment.
